

## EQUIPMENT

<b>Equipment name</b>	<ul style="list-style-type: none"><li>• Weima Pusher Slow Mill</li></ul>
<b>Characteristics</b>	<ul style="list-style-type: none"><li>• Material Splitting According to Different Sieving Grids</li></ul>
<b>Particularités</b>	<ul style="list-style-type: none"><li>• Slow grinding at approx. 100 RPM</li><li>• Sieving grids from 20 mm to 6 mm</li><li>10 HP motor and integrated pusher</li></ul>
<b>Usage</b>	<ul style="list-style-type: none"><li>• The slow mill is useful for splitting different bio-based or inorganic materials to achieve a more uniform particle size at the end of the process. The pusher avoids bridging the material to ensure constant flow rates of around 300 kg/hour.</li></ul>
<b>Technical specifications</b>	<ul style="list-style-type: none"><li>• Manufacturier : Weima</li><li>• Type: Pusher Slow Crusher WL6S 30</li><li>• Engine: 10 HP</li><li>• Sieve diameter:</li><li>• Available grids: 19 mm; 6 mm</li></ul>
<b>Examples of use</b>	Forest bark shredding Paper and cardboard attrition
